Water quality refers to the chemical, physical, biological, and radiological characteristics of water. It is a measure of the condition of water relative to the requirements of one or more biotic species and or to any human need or purpose. It is most frequently used by reference to a set of standards against which compliance, generally achieved through treatment of the water, can be assessed.

Note H(i): Sampling times and periods Season period The bathing season period will vary according to location, but will generally extend from 1 November to 31 March. If a beach is used all year round the grade and weekly monitoring should reflect this (i.e. should be based on data for a period relevant to usage).
